

VNU University of Engineering and Technology

Topic

Presenter:

Le Van A

Advisor / Supervisor:

Dr. Supervisor Name

Date:

August 23, 2026

Table of Contents

Presentation outline

1. First Section
2. Second Section
3. Third Section
4. Conclusion

PART I

First Section

Standard Slide Title

Optional subtitle or topic description

- First main point or observation
  - Sub-point or supporting detail
  - Additional explanation or note
- Second main point or observation
  - Sub-point or supporting detail
  - Additional explanation or note
- Third main point or observation
  - Sub-point or supporting detail

Two-Column Slide Title

Optional subtitle

Left Column Title

- ✗ Limitation or classical item 1
- ✗ Limitation or classical item 2
- ✓ Positive aspect or item 3

Right Column Title

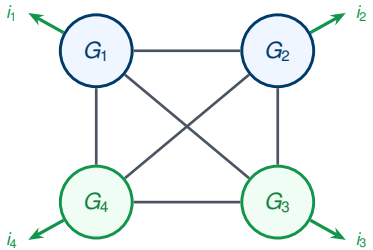

- ✓ Proposed advantage or item 1
- ✓ Proposed advantage or item 2
- ✓ Proposed advantage or item 3

PART II

Second Section

Diagram & Formulation Title

Optional subtitle

Theoretical Formulation / Equation

$$\mathcal{X}(i_1, i_2, \ldots, i_N) = \sum_{r_{1,2},\ldots,r_{N-1,N}} \prod_{k=1}^{N} G_k(i_k, r_{1,k}, \ldots, r_{k,N})$$

Blocks & Cards Title

Optional subtitle

Standard Block Title

Your main content, definition, or mathematical formula here.

Alert Block Title

Important note, warning, or limitation here.

Example Block Title

Example, case study, or positive result here.

PART III

Third Section

Key Results at a Glance

Optional subtitle

+95.8%
Metric Label 1

8.5×
Metric Label 2

-42%
Metric Label 3

Summary Note: Add any concluding observation or key takeaway about the metrics above.

Table Slide Title

Optional subtitle

Method / Model	Metric 1	Metric 2	Metric 3	Status
Baseline Method	91.2	10.5	1.0×	Baseline
Alternative Method A	93.4	4.2	2.5×	✓ Pass
Alternative Method B	94.8	3.1	3.4×	✓ Pass
Proposed Method	**97.5**	**1.8**	**5.8×**	✓ **Best**

Observation: Highlight the primary findings or quantitative comparisons from the table.

Code Snippet Title

Optional subtitle

```python
# Write your code snippet here
def sample_function(input_data):
    """Docstring explanation."""
    processed_result = input_data * 2
    return processed_result

# Example execution
output = sample_function(10)
print(f"Output: {output}")
```

PART IV

Conclusion

Conclusion & Future Work

Summary of key takeaways

Key Takeaways

1. Summary point 1
2. Summary point 2
3. Summary point 3

Future Work

1. Future direction 1
2. Future direction 2
3. Future direction 3

Questions & Answers

Session for feedback and discussion
